Possible End Points For Apartment (On the Basis of Database (ER Digram)).

BaseUrl - https://xyz.com

1- To fetch Detail for Apartment (Building/property Detail)

/detail

On Succees (200) response would be

const data ={

buildingdetail:{},

total_number_of_apartment,

some_other_related_data,

}

2- To fetch of All Apartments (On the basis of Apartment type)

/apartmentList/page/type

(it could be like 1bhk , 2bhk , 3bhk).

if type is not there then by default it will return all the apartments.

By default it will fetch with page no -1 (To limit the Number of records).

on Success (200)

```
const data = {

totalNumber,

specification,

roomandotherSpecification,

}
```

3- To fetch Detail for specific flat / Apartment.

/apartMentDetail /flatId

To Fetch Detail for any specific flat/apartment

```
onSuccess respocuse could be

data = {

id,

size,

specification ,

room  Specification

other related info ,

}
```
